

Quality and Environment Policy

Nordifa develops, manufactures and markets industrial textiles with an environmentally friendly image.

We want our products and services to create the conditions for a sustainable society and promote advances in quality assurance and environmental protection by reducing our environmental impact and making optimum use of resources. In all areas of our business, we are committed to increasing customer satisfaction by means of proactive quality assurance and environmental protection.

This will be achieved through:

»

Continuous improvement

Our quality assurance and environmental protection activities must be preventive, open, and geared to continuous improvement.

»

Statutory and other requirements

The requirements of environmental legislation, regulatory bodies and our customers must represent the minimum acceptable standards for quality assurance and environmental protection in our business.

»

Quality and environmental targets

Our targets must be based on quality and environmental impact, continuously monitored, and adapted to our business.

»

Good housekeeping and recycling

Raw materials and energy must be used in the most efficient way possible. We must make it easy to reuse and recycle.

»

Knowledge

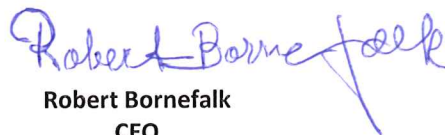

Our employees and contractors must be knowledgeable about quality and environmental issues. They must be aware of the means by which quality, the environment, health and safety can be influenced and protected.

»

Communication

We must inspire our suppliers, contractors and customers to develop their environmental protection activities.
