THE SMART WAY TO TRANSFORM YOUR SPORTS ARENA INTO A MULTI-PURPOSE FACILITY.

THE SIMPLICITY OF PROTECTING THE SENSITIVE SPORTS FLOORS.
To achieve an economic viability, a modern sports arena must be capable to being used for a wide range of purposes. Many modern sports floors are sensitive to rough usage, and must be protected if the facility is used for other events. The solution is to cover the floor with easily-installed Rinktex.

Versatility and easy transformation are the secrets of success for sports arenas in Sweden, Finland, Russia, and several other countries. To maximize the utilization of the building, it is important that the activities can be changed rapidly – ice hockey today, rock concert tomorrow.

Usually, the biggest challenge is the surface of the ice. The solution to the problem is to cover the ice with Rinktex isolating sports surface - a firm covering system that can function on its own as a floor surface or as a foundation surface for a more specialised flooring system. It only takes two hours to cover a normal size hockey rink completely.

Working on ice is risky, and Rinktex is an excellent and simple way to create a safe working environment. Rinktex works equally well as a protection system for sensitive flooring in sports arenas or as an insulating floor covering in all types of facilities.

The Nordifa Rinktex is available in several colors. It can also be delivered double-sided with different colors on the on both sides, giving even greater flexibility.

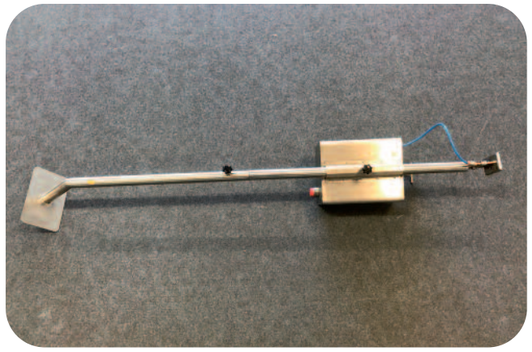
NO EUROVISION SONG CONTEST WITHOUT RINKTEX.
Globen Arena is one of the most versatile and well-known sports facilities in Sweden. Sports, concerts and special events are held in this facility more often than anywhere else in Sweden. The arena staff is mastering the art of transforming the facility from an ice rink into a concert hall in an instant. The secret of their efficiency is the insulating Rinktex floor, which is laid directly on the ice to serve as a foundation for other activities and furnishings.

Technical information

Material	100% needled felt made from synthetic fiber
Weight	approx. 1800g/m² standard
U value	As Expanded polystyrene foam/mineral wool
Width	4 metres standard
Colors	Grey, red, green, blue

Rinktex can be supplied double-sided, with different colors on each side.

It takes about two hours to cover the ice or the floor of an arena with Rinktex. At the same time, the risk of slipping accidents is eliminated. Installation without using a forklift is possible by using a specially designed cart, which is available as an accessory.



Rinktex is freeze-stabilized on the ice by using a special device to melt the ice where adjacent carpets meet. This device is available as an accessory. On other surfaces, double-sided adhesive tape is preferred to be used when installing Rinktex.
